

Laboratory Activity No. 10	
The Selection Widgets using Pycharm	
Course Code: CPE103	Program: BSCPE
Course Title: Object-Oriented Programming	Date Performed: 03 – 22 – 25
Section: 1 – A	Date Submitted: 03 – 22 – 25
Name: REGONDOLA, JEZREEL P.	Instructor: Engr. Maria Rizette H. Sayo
1. Objective(s):	
This activity aims to familiarize students with the Pycharm framework and selection widget	
2. Intended Learning Outcomes (ILOs):	
The students should be able to: 2.1 To create a Python program that use selection widget like Combobox 2.2 To use ttk function as part of Tk () in the Tkinter module	
3. Discussion:	
A Graphical User Interface (GUI) application is a program that the user can interact with through graphics (windows, buttons, text fields, checkboxes, images, icons, etc..) such as the Desktop GUI of Windows OS by using a mouse and keyboard unlike with a Command-line program or Terminal program that support keyboard inputs only. Pycharm is an integrated development environment used for programming in Python. It provides code analysis, a graphical debugger, an integrated unit tester, integration with version control systems, and supports web development with Django.	
4. Materials and Equipment:	
Desktop Computer with Anaconda Python or Pycharm Windows Operating System	
5. Procedure:	

```
# Creating tkinter window and set dimensions
window = tk.Tk()
window.title('Combobox')
window.geometry('500x250')

def choice(event):
    month = event.widget.get()
    print("Your birth month", month)

# label text for title
ttk.Label(window, text="Choose your birth month",
          background='light yellow', foreground="black",
          font=("Times New Roman", 15)).grid(row=0, column=1)
```

1.

```
month.grid(column=1, row=5)
month.current()

def choice(event):
    showinfo(
        title = "Selection",
        message = f'You selected{n.get()}')

month.bind("<<ComboboxSelected>>", choice)
window.mainloop()
```

2. Run the program and observe the output.

Adding an icon

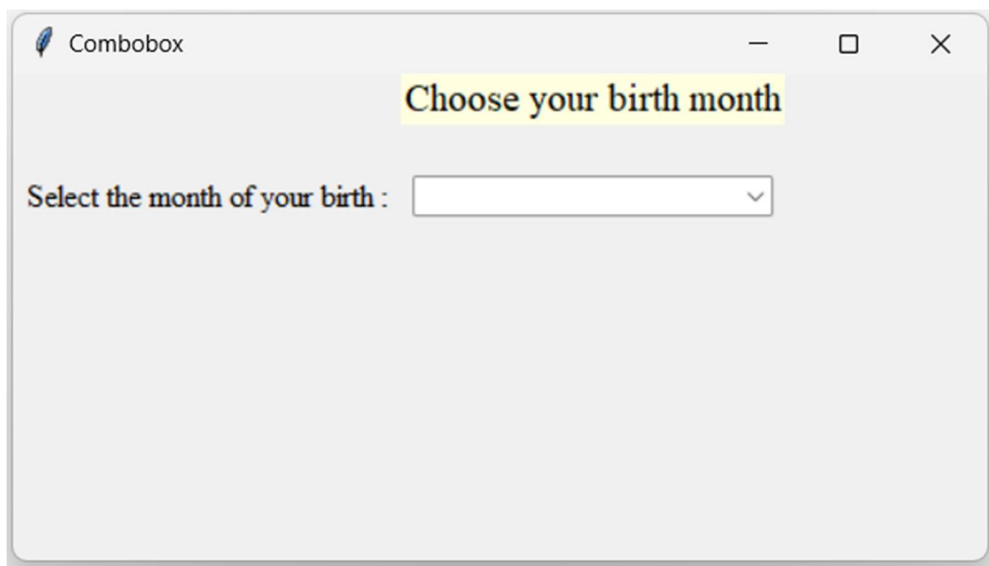

3. Download any .ico picture from <https://icon-icons.com/> or any similar sites.
4. Place the icon in your folder (ex. Oopfa1<lastname>_lab10)

```
# Set label
ttk.Label(window, text="Select the month of your birth :",
           font=("Times New Roman", 12)).grid(column=0,
                                                row=5, padx=5, pady=25)

# Create Combobox
n = tk.StringVar()
month = ttk.Combobox(window, width=27, textvariable=n)

# Adding combobox drop down list
month['values'] = (' January',
                  ' February',
                  ' March',
                  ' April',
                  ' May',
                  ' June',
                  ' July',
                  ' August',
                  'September',
                  'October',
                  'November',
                  'December')
```

5. Run the program again, the program should now have an icon similar to the program below.

6. Supplementary Activity:

Task

1. Create label widgets below to label your birth date <dd>, birth year <yyyy>
2. Create combobox to drop down your birth date <dd>, birth year <yyyy>
3. Create another method to show info about your birth date <dd>, birth year <yyyy>

Note: You may also use additional selection(listbox, radio button, check button) or common widgets to improve the design of your GUI.

Questions

1. What are selection widgets?
 - GUI elements like ComboBox, ListBox, RadioButton, and CheckButton that allow users to select options.
2. Which Python libraries provide selection widgets?
 - Tkinter, PyQt, Kivy, and wxPython.
3. How do selection widgets enhance user interaction in GUI applications?
 - They make data input easier, prevent errors, and improve UI experience.

7. Conclusion:

- User interaction are improved with selection widgets by providing us structured input methods. Usability are also enhanced by implementing elements like combobox and listbox in tkinter, making applications more intuitive and user-friendly.

8. Assessment Rubric:
